

ABSTRACT OF THE DISCLOSURE

Method for determining a nucleotide sequence of  
an analytical oligo nucleic acid for use in analysis of  
a nucleic acid, comprising the steps of listing all  
5 unit nucleotide sequences present on a target nucleic  
acid having a predetermined length which is shorter  
than that of the analytical oligo nucleic acid to  
be designed, and extracting a nucleotide sequence  
containing a sequence occurring at a low frequency  
10 on the target nucleic acid from the candidate sequences  
of the analytical oligo nucleic acid on the basis of  
a frequency of each of the listed individual unit  
sequences.
